

# One watch is everything

**Vivago®** develops smart safety and wellbeing solutions for preventive care. The innovative solutions cover the whole chain of care from home care to assisted living, care homes, hospitals and rehabilitation.

Vivago's solutions increase the feeling of safety with automatic alarms and by providing wide range of wellbeing information to support daily care and to follow-up the effectiveness of care. Real-time notifications inform about changes in the person's wellbeing and it enables care providers to react proactively and focus on individual care. Wellbeing information can also be shared with relatives.

As a pioneer in health care technology, Vivago already ensures safety for tens of thousands of individuals in Europe. Vivago's unique solutions are patented and have been awarded with several international recognitions. The high-quality products are manufactured in Finland.

With the help of Vivago solution, people can get better care and live longer and safer at home. Vivago provides better care and also enables remarkable savings in rehabilitation and home care.

## Exceptional safety

Vivago offers innovative solutions that ensure the wellbeing of elderly and make their lives safer. Vivago's solutions differ from traditional safety products by ensuring that help is provided also when the watch user is unable to ask for help. Additionally, Vivago provides a wide range of wellbeing information of the watch user to support proactive care.

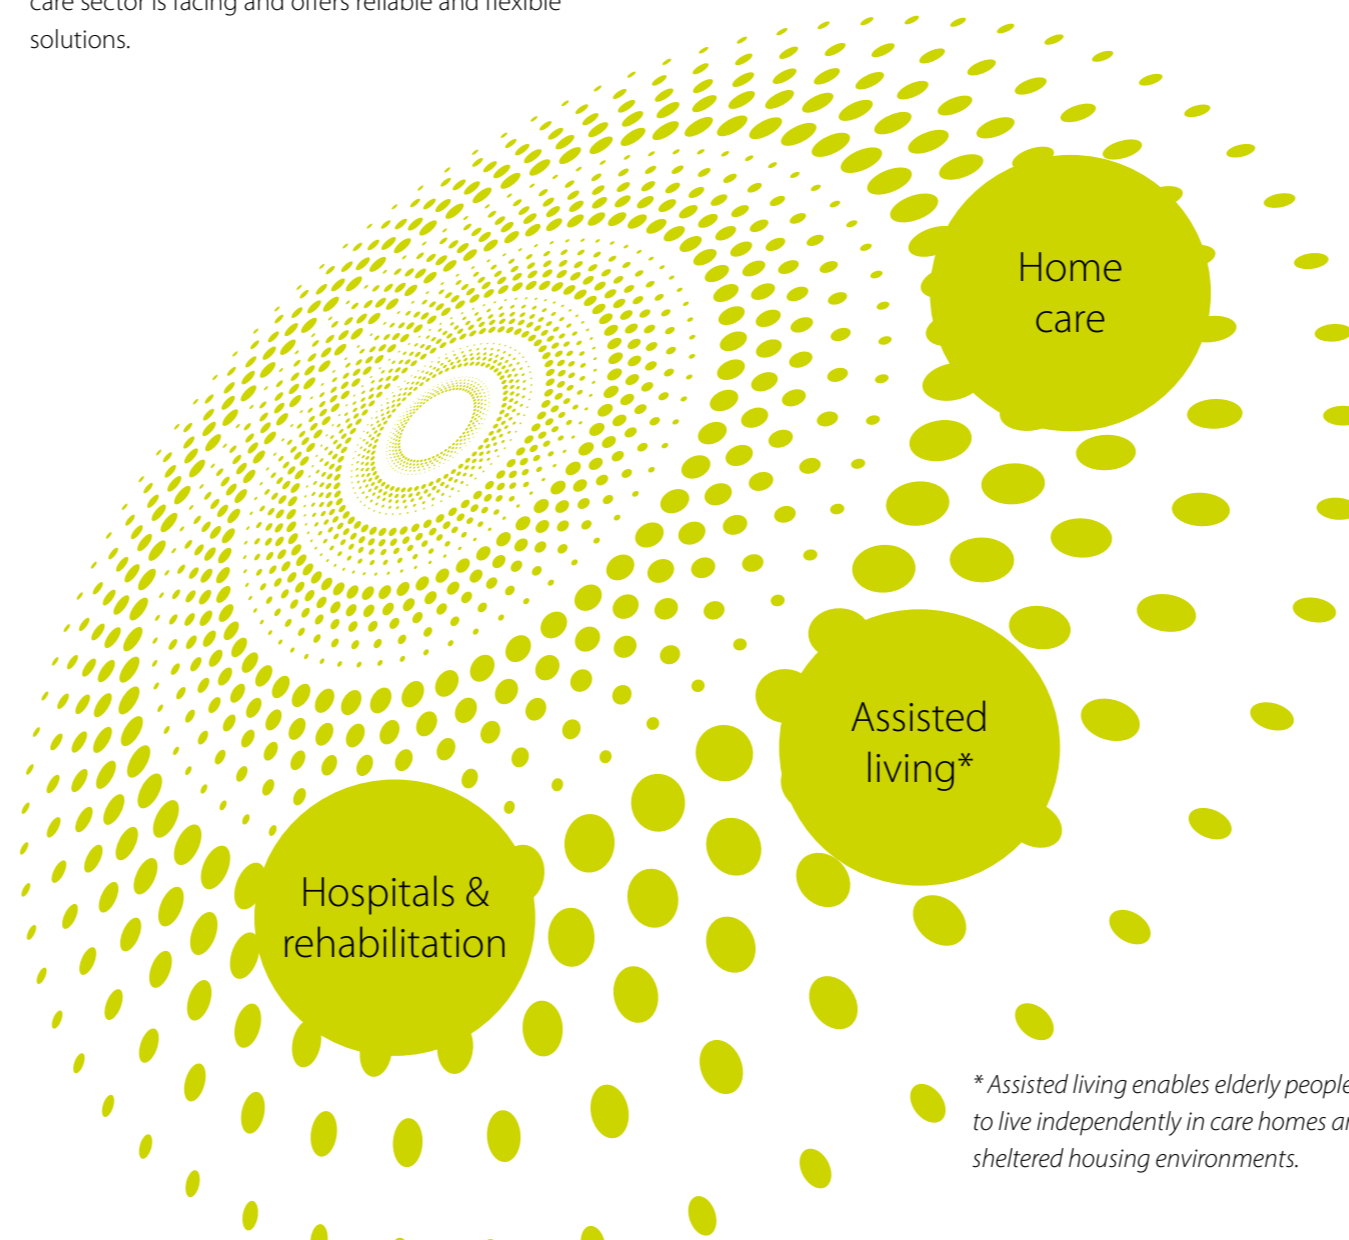

## Awarded technology

Vivago was established in 1994 to develop, sell, and market automatic safety solutions that monitor and analyse activity levels. Vivago's innovative solutions are patented and have received numerous national and international awards.

# Solutions for the whole chain of care

An ageing population increases the pressure on health care services. To be able to provide excellent health care services, there is a need to optimise efficient use of resources. The elderly want to be able to live independently, whereas the care personnel should be able to focus on care work and not on routine jobs. Vivago knows the challenges the health care sector is facing and offers reliable and flexible solutions.

Vivago's solutions cover the whole chain of care from home care to assisted living, care homes, hospitals and rehabilitation. Vivago solutions enable the flow of information inside the care chain and improve ways of successful hospital discharge and rehabilitation.

*\* Assisted living enables elderly people to live independently in care homes and sheltered housing environments.*

With Vivago MOBILE application it is easy to follow-up wellbeing and receive alarms.

### Safely living at home

Vivago's home solution supports the independent living at home. Solution is based on the Vivago CARE watch and the Vivago Home POINT base station with voice communication.

The Vivago CARE watch learns its user's circadian rhythm. If the watch detects a sudden change in the user's wellbeing, it calls automatically for help in situations where the user is not able to do it himself.

Vivago CARE watch is measuring the user's wellbeing. The captured data is transferred into reports which are easy to interpret and support every day work of the care providers and relatives. Reports provide valuable information of the watch user's wellbeing, quality and rhythm of sleep and activity level during the day. Automatic notification will be sent when a change in the user's wellbeing has occurred. This enables timely and proactive care.

### Quality and added value to assisted living

Vivago's assisted living solution is much more than a regular nurse call system. It can be used in all forms of assisted living regardless of size, and it can be easily customised to meet the needs of the resident and of the service provider. Assisted living nowadays presupposes reliable and robust safety solutions. It

requires comprehensive and continuous monitoring of the resident's wellbeing, as well as tools that guarantee high quality and timely care. Assisted living residents with a memory impairment pose a particular challenge because their movement and functional ability require enhanced monitoring.

### Safety for hospitals – rehabilitation and discharge planning support

For hospital patients, Vivago's product family includes unique solutions to provide safety and to monitor patient wellbeing and health. Vivago's innovative solutions make automated and reliable continuous monitoring of the patient's functional ability possible. The ability to measure and document treatment ensures that treatment is based on information.

Individual reports inform about changes in the patient's wellbeing, help to plan treatment and discharge, and monitor wellbeing after rehabilitation. Vivago's information allows the nursing staff to focus fully on care, instead of having to spend valuable time writing reports.
